Naturo 80 ALU is a wooden window system that is becoming more and more common, especially in modern buildings. Its great advantage is aluminium overlays, which make it similar to aluminium windows from the outside. This allows office buildings and apartment buildings to perfectly fit the trend of minimalist facades commonly found in the centres of large cities.

Naturo 80 ALU windows exude a warm charm, and the wood used to create them comes from ethical sources. These are highly energy-efficient products, so by choosing them, the investor minimizes his carbon footprint not only at the stage of production, but also during operation.

The aesthetics offered by Naturo 80 ALU are stunning. From the outside, the window presents expressive colours of varnished aluminium, and there is **a wide range of colours from the RAL palette to choose from.** From the inside, however, it offers a variety of possibilities and will adapt to the individual preferences of the client.

*The above value of U_w is given for a reference window with dimensions of 1230 x 1480 mm.
