

Unico side-hinged garage doors

- ✓ 1.5–2.0 mm steel profiles
- ✓ filling with a 40 mm sectional door panel
- ✓ polyurethane foam insulation of the panel
- ✓ falling threshold
- ✓ painting profiles in colours from the RAL palette

Unico is a steel side-hinged garage door system equipped with a thermal break. It utilises 40 mm thick panels filled with polyurethane foam, used in sectional doors, which guarantees excellent thermal parameters. An additional perimeter seal further improves its insulation.

Single- and double-leaf side-hinged Unico doors use 1.5 to 2.0 mm warm galvanised steel profiles painted in any colour from the RAL palette (powder coating). The thermal break, sinusoidal in shape, also improves the static parameters of the door.

This universal solution is installed in a garage opening or on a wall. The first approach allows opening at an angle of 90°, the second – 180°. It has a lock, handle, flush bolt and doorstops as standard.

The ease of matching Unico doors to any house, detached garage or outbuilding is guaranteed by **numerous colours, types of finishes and available glazing options.**
